SAESMVN01

## SANTOEMMA ELITE SILENT

**AFTER EVERY USE, ENSURE THAT YOU COMPLETE THE FOLLOWING 5 STEPS**

**1.**

Clean out top recovery tank thoroughly, flush with clean water.

**2.**

Ensure the blue vacuum filter is clean and dry.

**3.**

Run vacuum for 10 minutes with the top dome removed. This will dry out any moisture that is sitting near the motor.

**4.**

Always leave clear dome to one side or upside down. This will help the tank not to condensate, consequently extending the life of the vacuum motors.

**5.**

Vacuum out the brush to remove hair and carpet fluff. This is easiest done when the fluff is dry.

## SANTOEMMA NS300 WAND

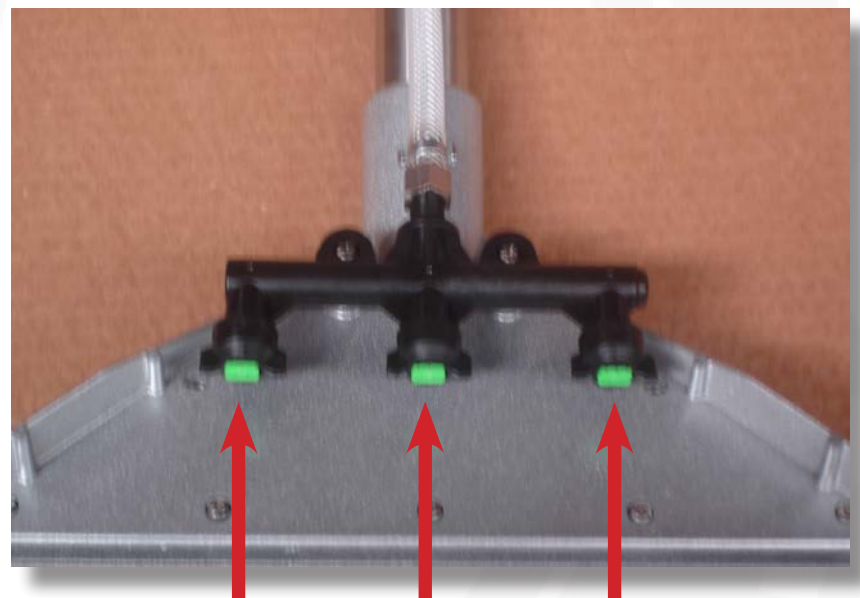

**AFTER EVERY USE, ENSURE THAT YOU  
COMPLETE THE FOLLOWING 3 STEPS**

**1.**

Disconnect wand from hose and turn upside down over a drain. This will empty the wand of water to keep it in good condition when not in use.

**2.**

Remove jet nozzles and holders, clean out regularly. Replace nozzles when they lose their ability to evenly fan the water spray.

**3.**

Remove carpet fibres from inside fishtail and stainless steel wand. A bottle brush is very useful for this.
